### Trouble Shooting Check list

#### 1- Oil Lines

- 2- O-Rings: We recommend the use of OEM Yamaha O-rings. If your original parts are worn or damaged they should be replaced.

- a. Yamaha's replacement part numbers:
  - i. 93210-56459-00 Large Black O-Ring
  - ii. 93210-54452-00 Large Orange O-Ring
  - iii. 93210-10096-00 Small Black O-Ring (located on the bottom bolt hole for the filter plate adapter on the engine)

#### 3- Mounting Bolts for the Filter Plate Adapter

- a. Questions: Are the Mounting Bolts in the proper locations on the Engine Adapter Plate?
- b. Solution: The bottom mount hole must use the longest of the bolts. This bolt has a wider collar that seats the small O-Ring. The head of the bolt is also larger for easier identification. (Download the latest version of the install manual from [per-form.com](http://per-form.com) for more detail.
- c. Also verify that the small bottom o-ring has not been lost or damaged during the assembly process.
